3D Systems Enhances Online Presence For Production 3D Printers

– Rapid Manufacturing Applications Take Center Stage –

ROCK HILL, South Carolina – September 07, 2011 – 3D Systems Corporation (NYSE:DDD) announced today the immediate availability of its new production 3D printer website designed to democratize access and accelerate adoption of its complete line of production 3D printers, precision engineered print materials and leading partner solutions. The new site integrates 3D Systems' production printers, including SLA®, SLS® and SLM printers into a contemporary, intuitive destination serving customers, prospects and partners with a secure, 24-hour online presence.

3D Systems invented the first 3D printing technology 25 years ago, changing the way people develop products across marketplaces from transportation, education, energy and recreation to healthcare and consumer goods. Through continued innovation, 3D Systems' content-to-print solutions have transformed entire industries as these powerful tools reach well beyond new product design and rapid prototyping to the on-demand, rapid manufacturing of end use parts and custom products.

"We are pleased to offer our constituents a compelling online destination that represents our entire portfolio of production 3D printers and solutions," said Cathy Lewis, Vice President, Global Marketing for 3D Systems. "This new site underscores our commitment to technology leadership and showcases the high value, low volume 3D printing applications that leverage our first mover advantage in this exciting shift to on-demand, rapid manufacturing."

About 3D Systems Corporation

3D Systems is a leading provider of 3D content-to-print solutions including 3D printers, print materials and on-demand custom parts services for professionals and consumers alike. The company also provides creative content development, design productivity tools and curation services and downloads. Its expertly integrated solutions replace, displace and complement traditional methods and reduce the time and cost of designing new products by printing real parts directly from digital input. These solutions are used to rapidly design, communicate, prototype and produce functional parts, empowering its customers to create with confidence.
